Chip Enabled MasterCard® Debit Cards

Chip technology is becoming the industry standard in the United States. This new technology aids in reducing counterfeit fraud around the world.

When a chip card is inserted into a chip card reader, the chip produces a unique code to validate the transaction. This validation process is an added safeguard against unauthorized use and counterfeiting.

New
Embedded
Chip

How to use your Chip Card:

- 1 Insert your Debit Card, face-up, into the front of the card reader.
- 2 Leave your Debit Card in the card reader during the entire transaction.
- 3 Follow the instructions on the screen; sign or use your PIN as needed.
- 4 Remove your Debit Card from the card reader when your transaction is complete.

The magnetic stripe, on the back of your card, is for use at traditional card readers. If a retailer has not switched to a new chip card reader, you will just swipe your card and complete your purchase.
